

Hip Arthroscopy Course

Frankfurt

25th of May of 2012

CAM Deformity Management Pedro Dantas

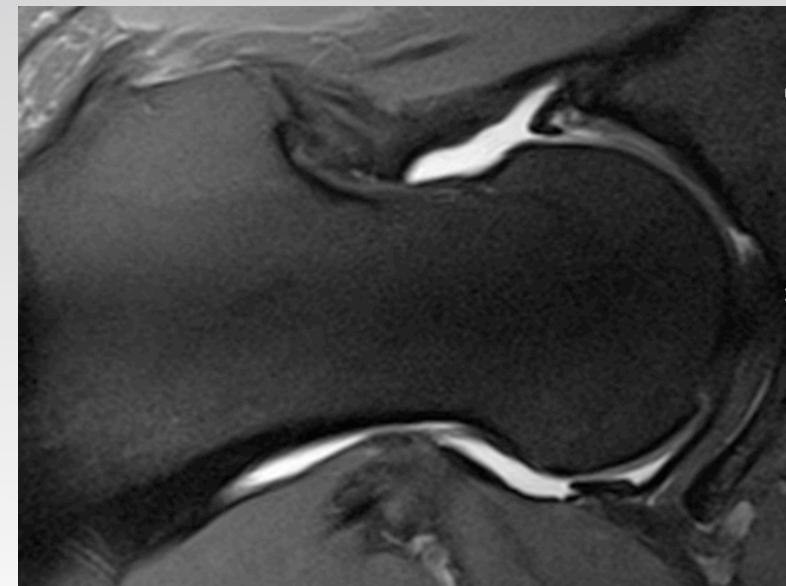

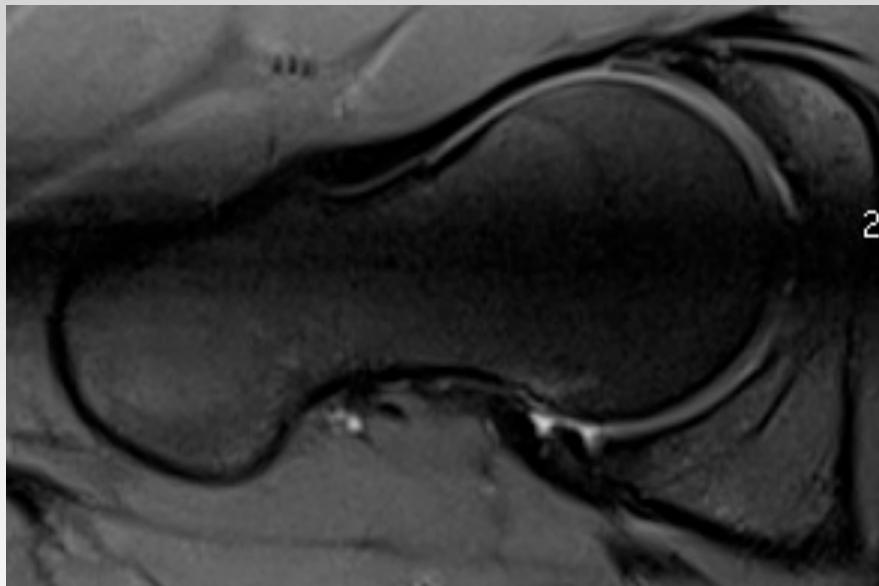

FAI

Morphological condition that can leads to intra articular lesions which are painful

FAI per se is not painful

No evidence at this point that arthritis can be prevented

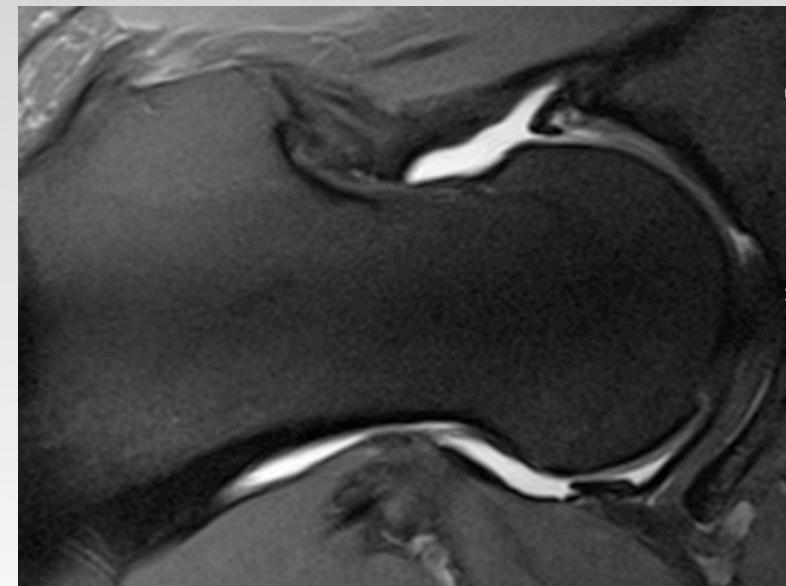

FAI

No evidence at this point that arthritis can be prevented

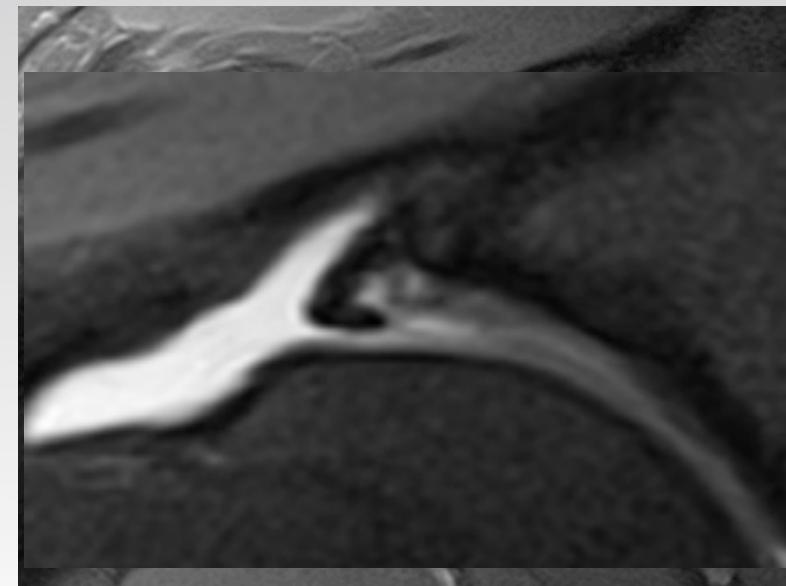

FAI

Morphological condition that can leads to intra articular lesions which are painful

FAI per se is not painful

No evidence at this point that arthritis can be prevented

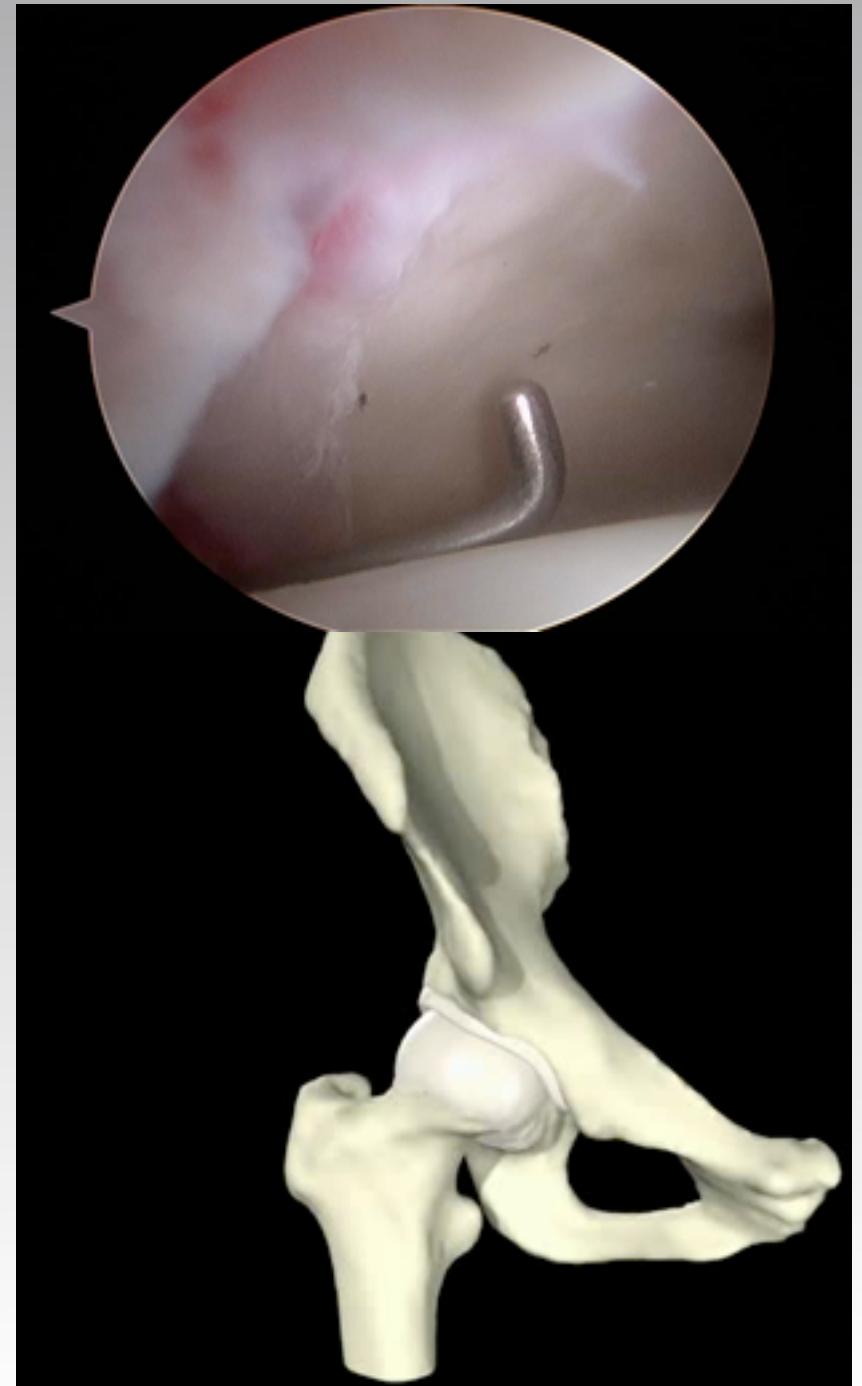

CAM

- Aspherical head / neck junction gets jammed into the acetabulum
- Abrasion of the acetabular cartilage or its avulsion from subcondral bone
- Labrum separation

Artro MRI

Imaging

Artro MRI

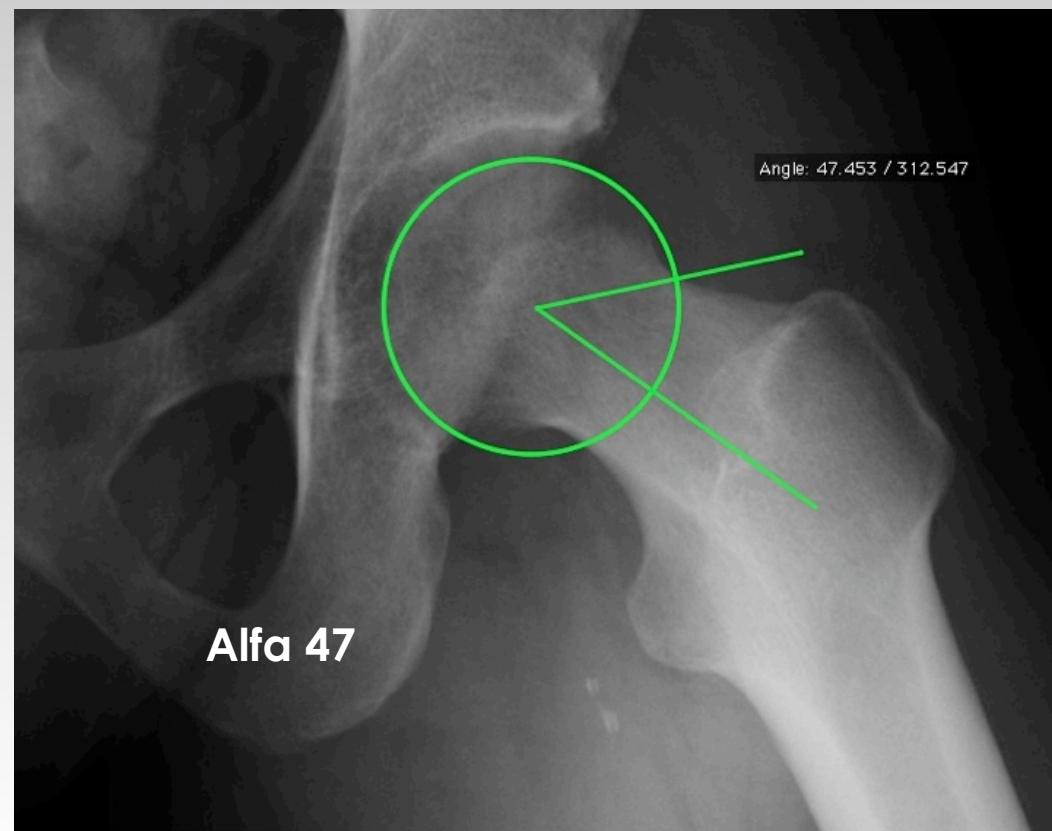

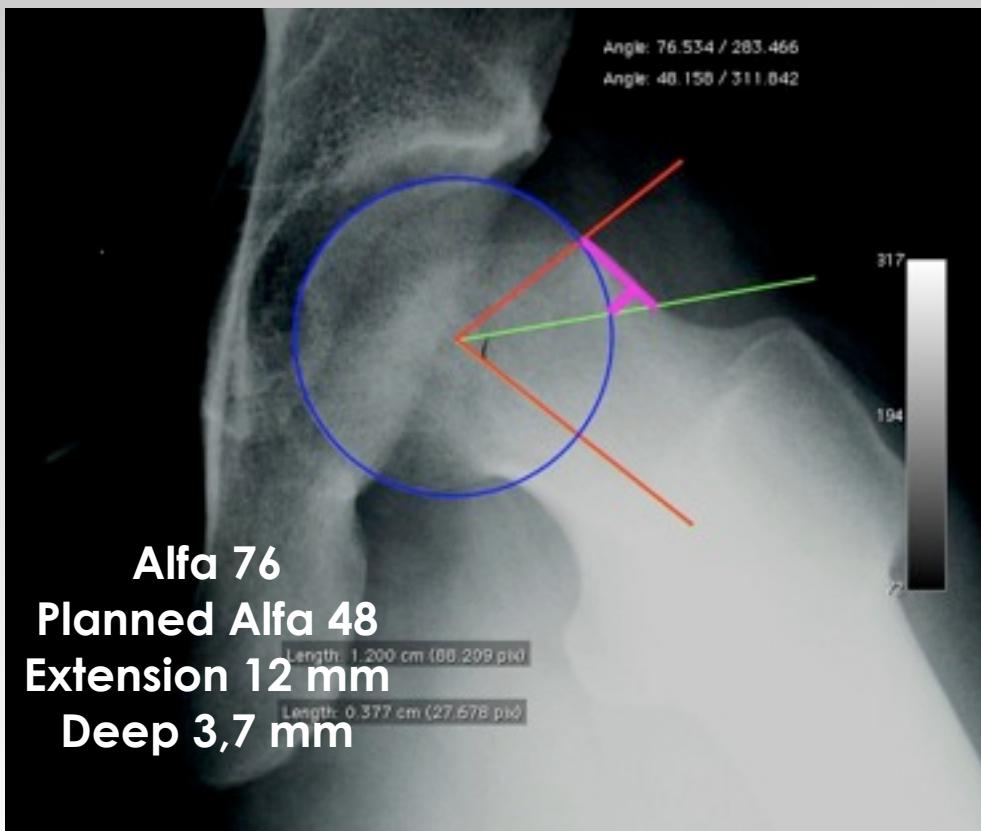

FAI - CAM

Planning

Treatment associated pathology

CAM - Location (anterior, anterolateral or lateral), extension e deep

Arthroscopy / Open treatment - Know your limits

CAM deformity management

Access

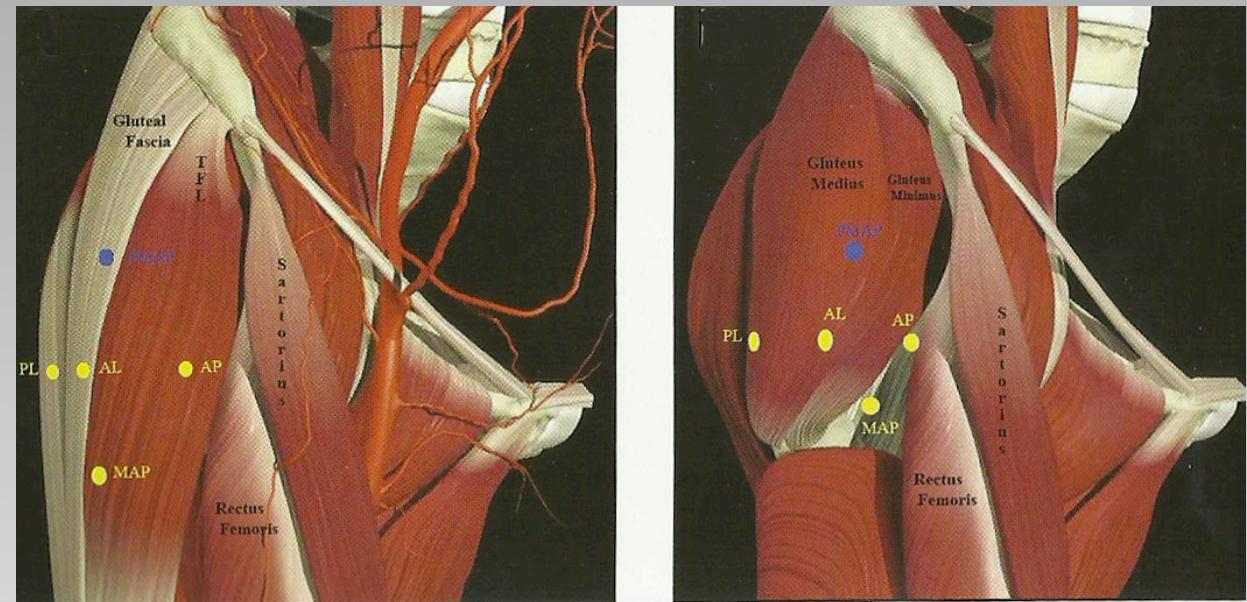

Portals - AL & MA

70° scope

Adjust portal placement based on anatomy

1st evaluation and treatment of pathology CC

2 nd PC - no traction

CAM deformity management

Exposure

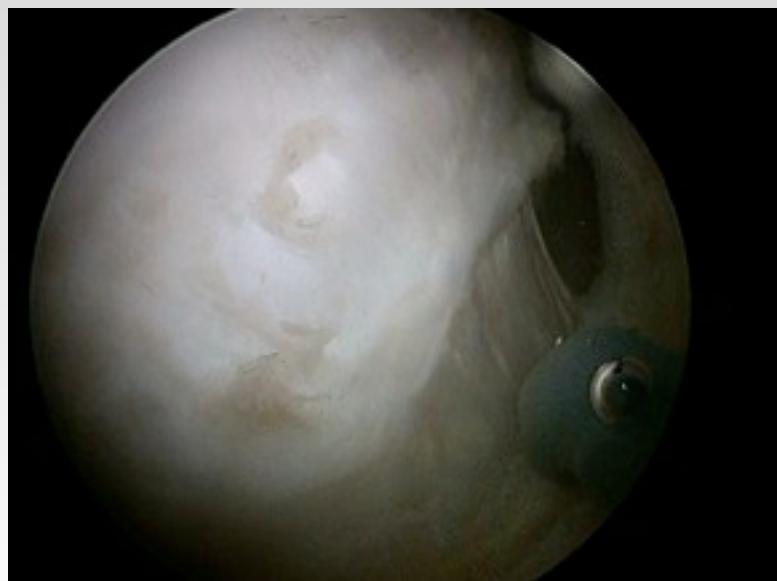

You can't fix what you don't see

Capsulotomy / Capsulectomie

T Capsulotomy - adjusted to location of femoral deformity

(lateral capsule is thicker)

Locate area of impingement - Impingement test

CAM deformity management

Exposure

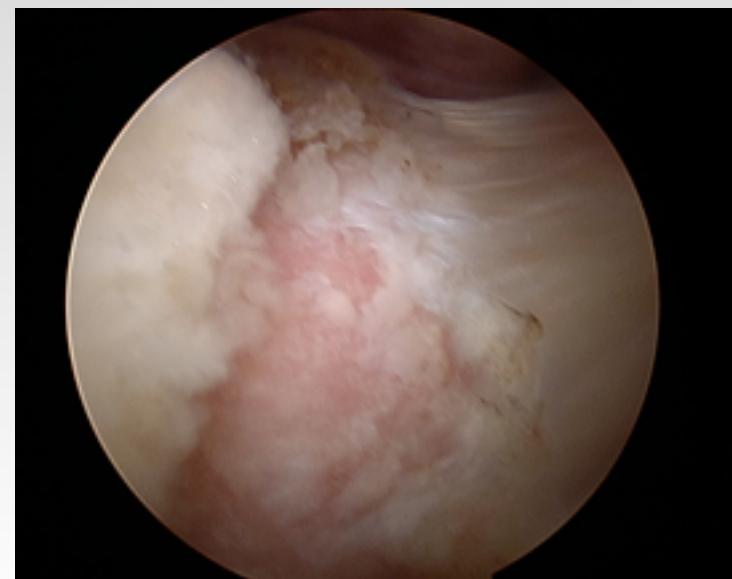

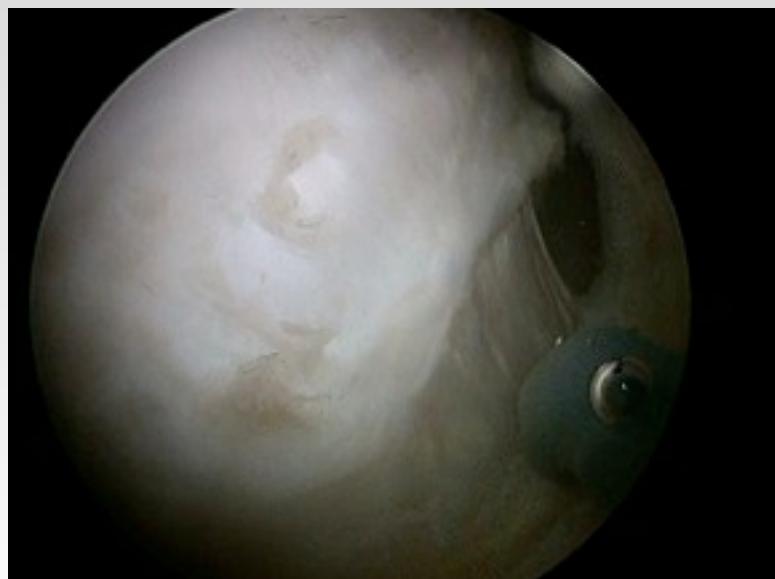

You can't fix what you don't see

Capsulotomy / Capsulectomie

T Capsulotomy - adjusted to location of femoral deformity

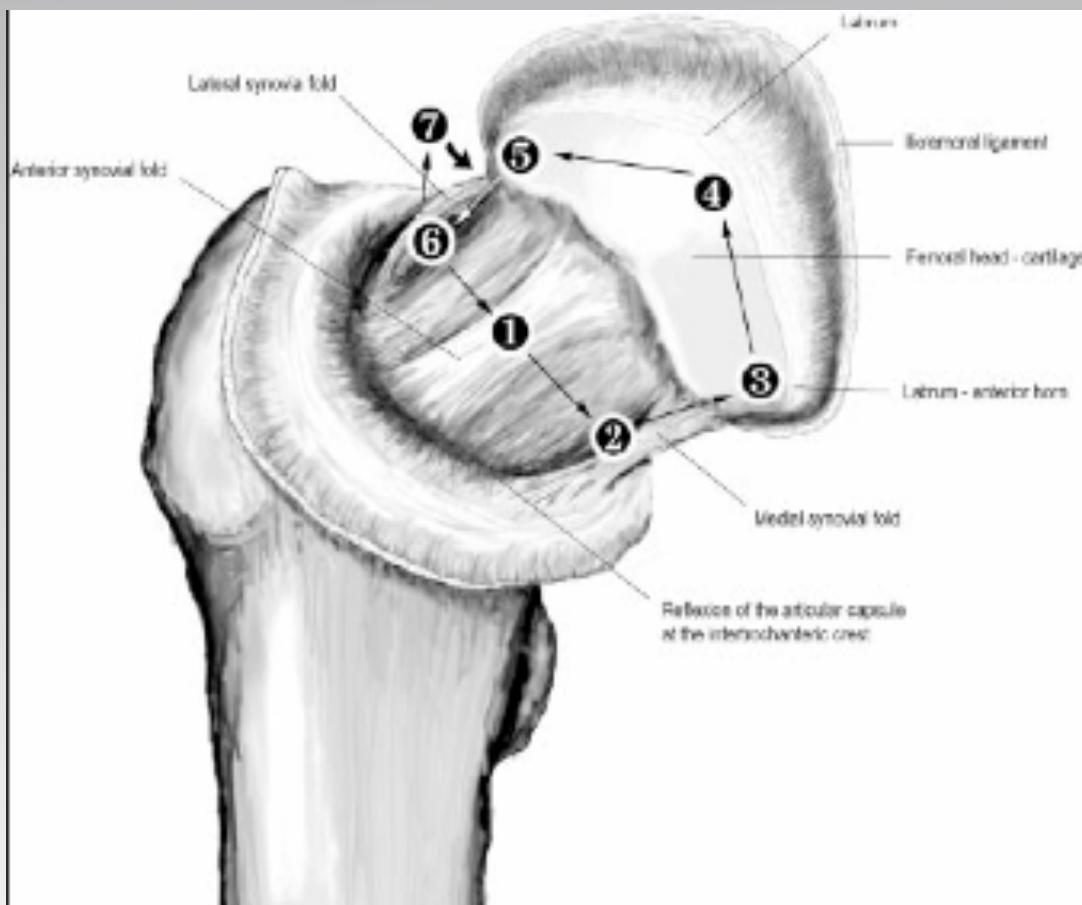

(lateral capsule is thicker)

Locate area of impingement - Impingement test

CAM deformity management

Exposure

1. anterior neck area
2. medial neck area
3. medial head area
4. anterior head area
5. lateral head area
6. lateral neck area
7. posterior area

(Dienst, 2001)

CAM deformity management

Treatment

Evaluate extension

medial limit (medial synovial fold - 6 o'clock)

lateral limit of resection (superior retinacular vessels)

Lateral based lesions - more difficult to address

Leg mobilisation

Flexion and ER - visualization anteromedial neck

Extension and IR - visualization superolateral neck

CAM deformity management

Treatment

Evaluate extension

medial limit (medial synovial fold - 6 o'clock)

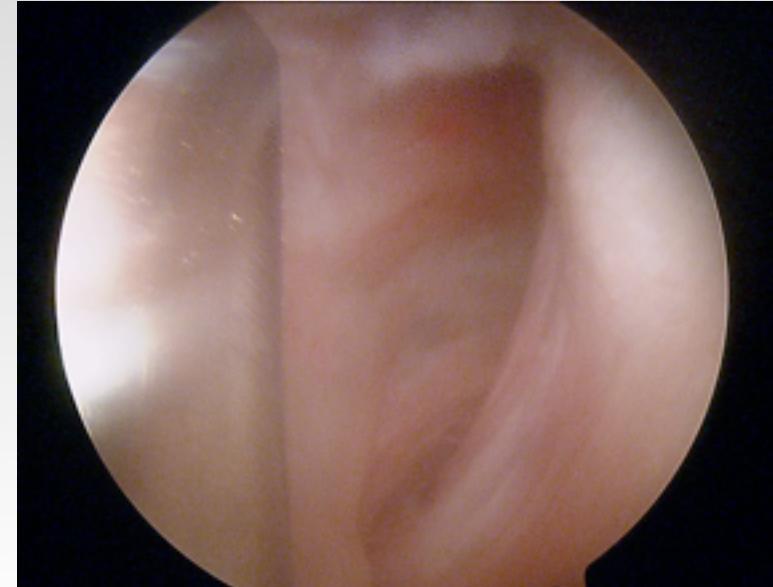

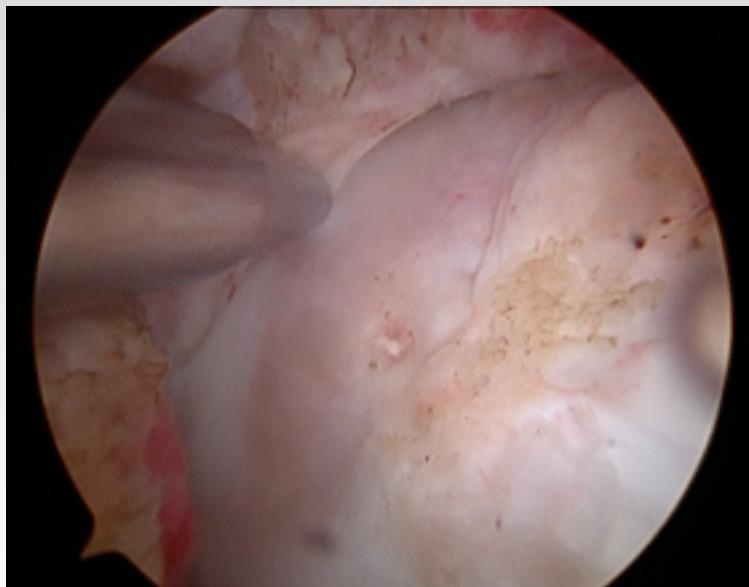

lateral limit of resection (superior retinacular vessels)

Lateral based lesions - more difficult to address

Leg mobilisation

Flexion and ER - visualization anteromedial neck

Extension and IR - visualization superolateral neck

CAM deformity management

Treatment

Evaluate extension

medial limit (medial synovial fold - 6 o'clock)

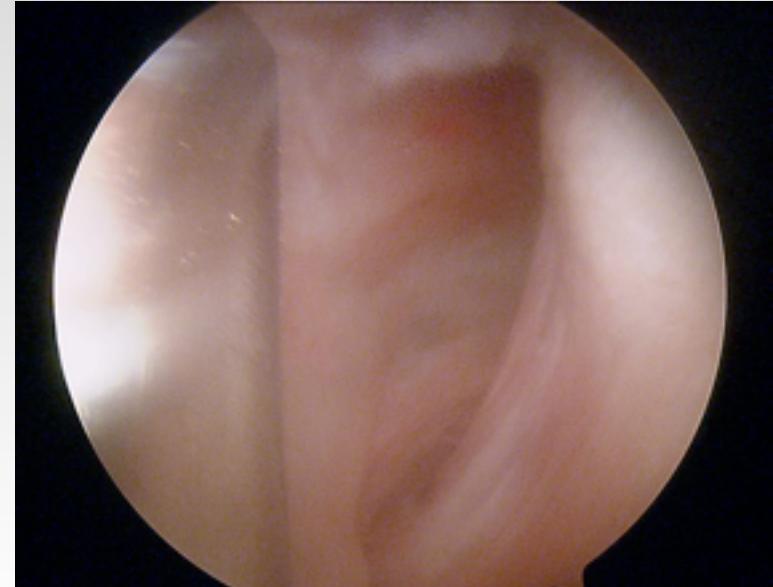

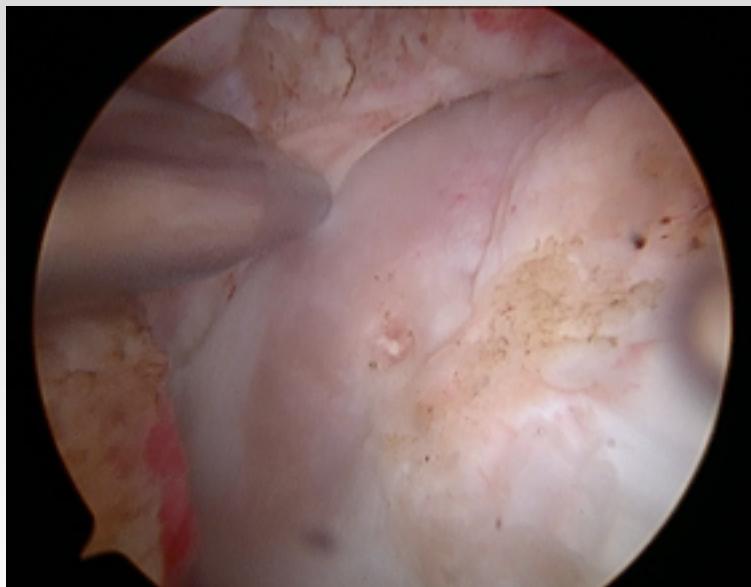

lateral limit of resection (superior retinacular vessels)

Lateral based lesions - more difficult to address

Leg mobilisation

Flexion and ER - visualization anteromedial neck

Extension and IR - visualization superolateral neck

CAM deformity management

Treatment

Remove soft tissues from the neck, fibrocystic alt. head-neck juncion

Gentle with soft tissues

Labrum repair / pathology to identify kissing lesions

Outline the proximal extent of resection

No higher or proximal than epiphyseal scar (fluoroscopy)

Identify and protect labrum

CAM deformity management

Treatment

Remove soft tissues from the neck, fibrocystic alt. head-neck juncion

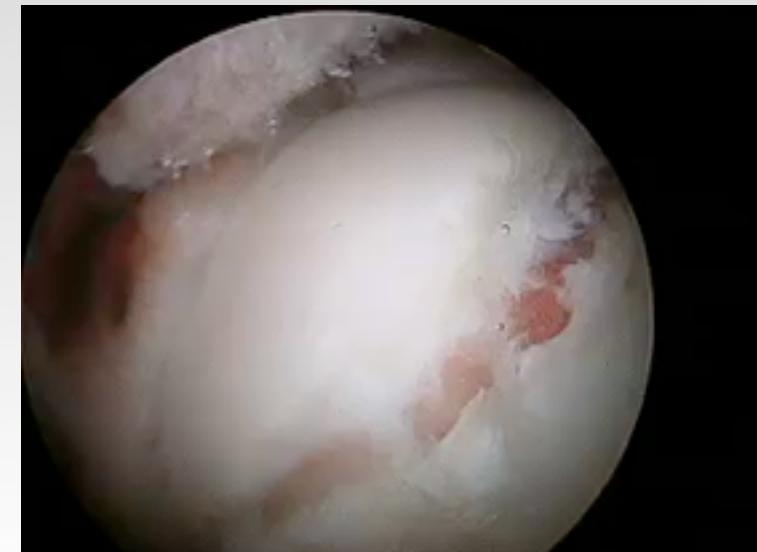

Gentle with soft tissues

Labrum repair / pathology to identify kissing lesions

Outline the proximal extent of resection

No higher or proximal than epiphyseal scar (fluoroscopy)

Identify and protect labrum

CAM deformity management

Treatment

Reshape - femoral offset and sphericity Burr 4 / 5.5 mm

Resection tapered distally - smooth and regular reshaping

Lateral CAM - MA Viewing, AL Working

Anterior CAM - AL Viewing, MA Working

CAM deformity management

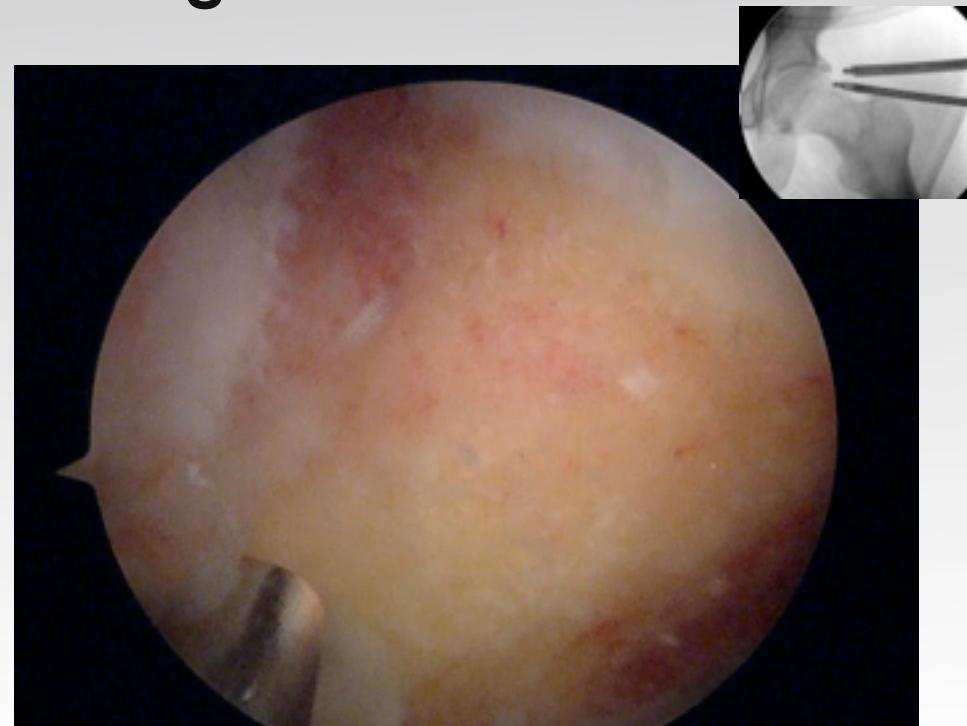

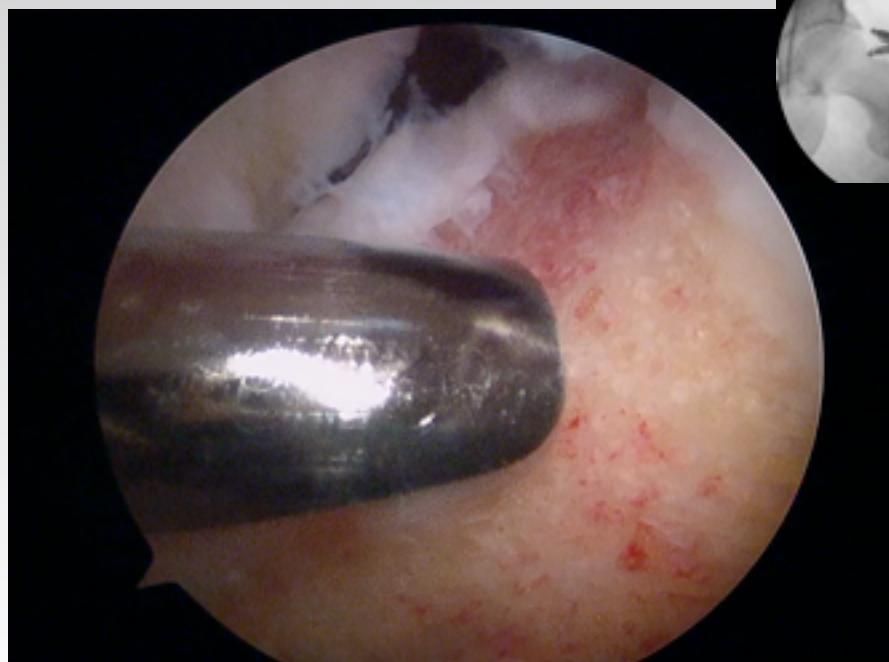

Treatment

Reshape - femoral offset and sphericity Burr 4 / 5.5 mm

Resection tapered distally - smooth and regular reshaping

Lateral CAM - MA Viewing, AL Working

Anterior CAM - AL Viewing, MA Working

CAM deformity management

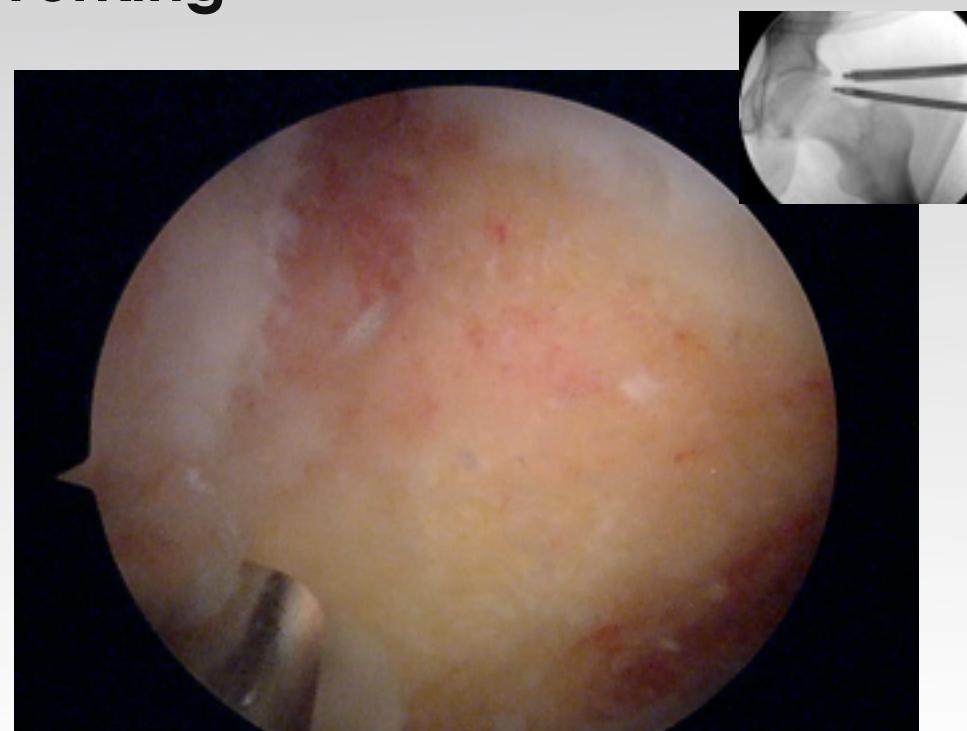

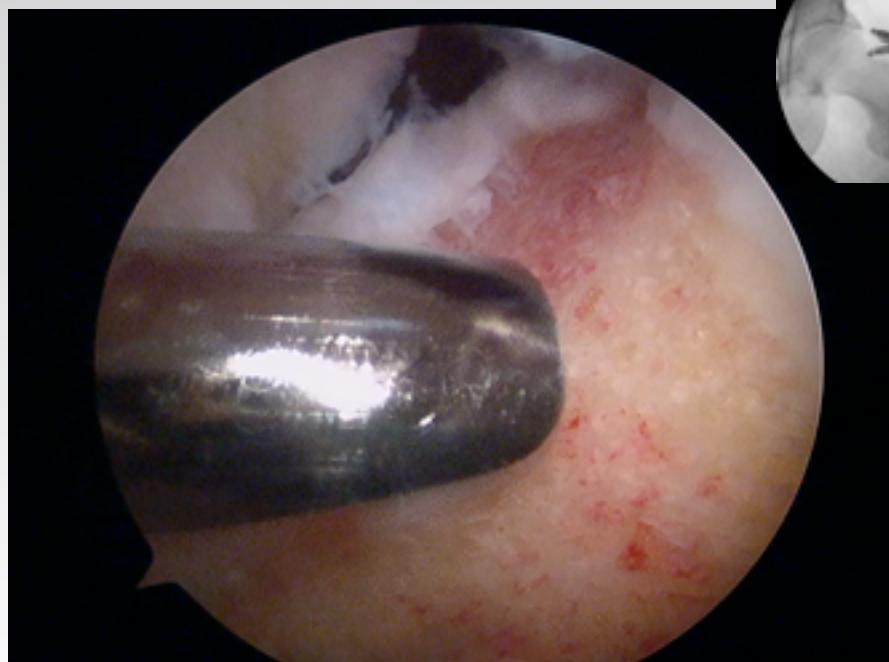

Treatment

Reshape - femoral offset and sphericity Burr 4 / 5.5 mm

Resection tapered distally - smooth and regular reshaping

Lateral CAM - MA Viewing, AL Working

Anterior CAM - AL Viewing, MA Working

CAM deformity management

Treatment

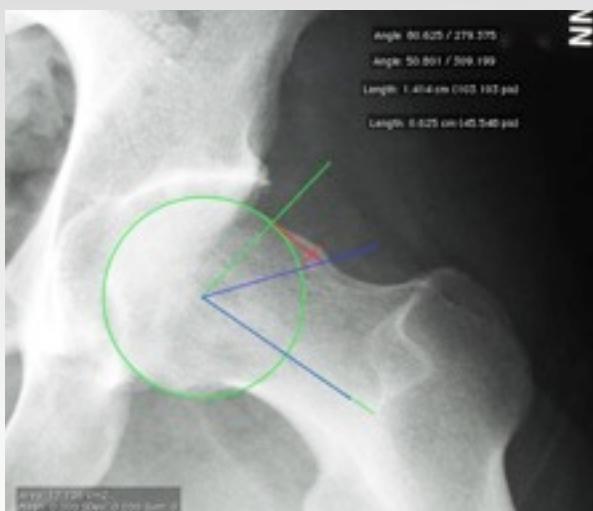

Maintain labrum sealing

Impingement test

Avoid over / under resection - failure to address bone impingement important cause unsuccessful hip arthroscopy.

Fluoroscopy AP and lateral to assess location and extent of resection (compare to pre op and planing)

Thank You
